

Standard Accessories

Enamel Shelf

Wire Shelf

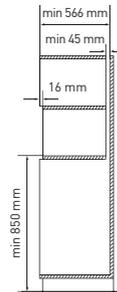

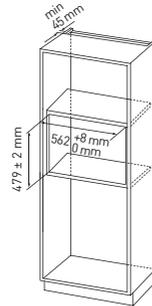

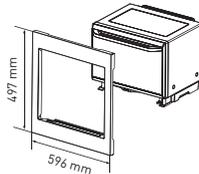

Glass Shelf

Optional Accessory

Trim Kit NN-TK813

NN-CF874B with NN-TK813

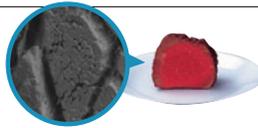

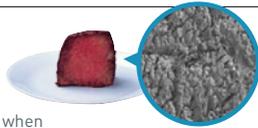

Evolution of Inverter Technology

Conventional microwave ovens operate on only one power level – fully on or off. Panasonic Inverter Technology delivers graduated power sequences continuously so food is cooked more evenly, with more delicious results.

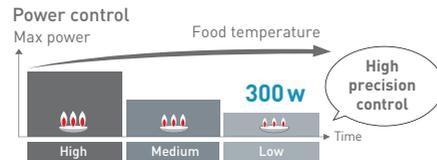

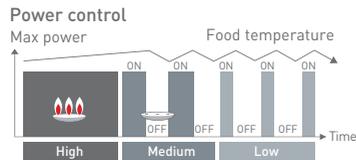

Conventional power supply system

Power is controlled with simple On/Off switching, so when power is On, items are overheated.

Inverter power supply system

Power is controlled precisely to prevent overheating, so no flavour is lost.

Specification

| Specification | NN-CF874BQPQ |
|--------------------------|--|
| Oven Capacity | 32 L |
| Cavity | Flat |
| Inverter | Yes |
| Micro Power | 1000 W |
| Grill | 1300 W |
| Convection | 1350 W |
| | 40, 100-230°C |
| Interior Dimensions (mm) | 410 (W) x 320 (D) x 250 (H) |
| Exterior Dimensions (mm) | 494 (W) x 438 (D) x 390 (H) |
| Outer Panel | Black |
| Control | Electrostatic glass touch control |
| Display | Light blue with operation guide |
| Cavity Material | Self-clean (catalytic) plate on top & back Easy-clean fluoroc coating on side |
| Key Features | 26 (Sensor Cook 10, Inverter Melt 4, Auto Weight 12) |

and delicious new taste

2-Level Convection Cooking — Saving your precious time

Convection cooking lets you cook two levels simultaneously, to make even large families happier at mealtime. A fan circulates the heat evenly throughout the oven so it reaches the food uniformly and efficiently. Ideal for roasting and baking with highly uniform heat.

Increased cooking space

Use dishes of any form and size thanks to the innovative Flatbed design, which gives you a cooking area that is 45% bigger when compared to conventional turntable models.

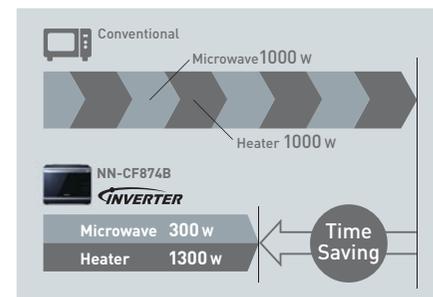

Simultaneous Combination Cooking

Panasonic's original Inverter Technology allows continuous microwave power to be used together with the heater. With previous models, the microwave and the heater had to be alternately switched on and off. Panasonic's simultaneous combination cooking reduces cooking time to 2/3.

Big reduction in cooking time

Sensor Cooking

The built-in sensor technology lets you cook food automatically – with no need to set the power level, food weight or cooking time.

11 Sensor Programmes

- Sensor Reheat
- Vegetables
- Rice
- Dried pasta
- Fresh pasta
- Casserole
- Frozen vegetables
- Steam Fish
- Steam Frozen Fish
- Jacket potato
- Frozen potato products

Easy clean cavity

Self-cleaning catalytic plates are used for the top and back surfaces, which require no cleaning. The left and right side surfaces have an easy-to-wipe fluoroc coating.

Operation guide

Displays the programme selected and shows the next step.

Advanced new electrostatic touch panel interface

Smart, easy setting with Swipe & Touch.

Stable grip with high rigidity and hand-fitting design

Sophisticated interface on one sheet of glass

Fully opening pull down door

A control unit combines with a luxurious door featuring a "one sheet of glass" design. This makes the oven interior wider and easier to use.
